Annotated Responses to Sample Multiple-Choice Questions for CSET: Vietnamese Subtest I

General Linguistics

1. **Correct Response: C.** (SMR Code: 1.1) The genetic classification of languages assumes that certain languages are related because they have evolved from a common ancestral language; for example, French and Spanish are classified as Romance languages because they can be traced back to a form of Latin used in the Roman Empire. Sometimes, though, the shared ancestral language is not as easily identifiable, and then the genetic classification is based on hypothetical reconstructions of the earlier forms of languages.

Linguistics of the Target Language

2. **Correct Response: A.** (SMR Code: 2.1) The letter *o* is an upper mid-back unrounded vowel. The letter *ô* is an upper mid-back rounded vowel. To round or unround these letters requires a change in the position of the lips.
3. **Correct Response: B.** (SMR Code: 2.1) The subordinating conjunction *khi*, when added to the beginning of the first sentence, creates the phrase "When he gets home from work," which is used to create the compound sentence "When he gets home from work, he walks the dog."
4. **Correct Response: A.** (SMR Code: 2.1) The pair of words *vì* and *nên* are used to express cause and effect in a sentence. *Vì* is a focal particle, meaning "because," and *nên* is a subordinating particle meaning "therefore, so, as a result."
5. **Correct Response: D.** (SMR Code: 2.2) The word *người* changes the verb "bake" to the noun "baker," the subject of the sentence. The word *để* must be added to the phrase *bắt đầu* to correctly form the infinitive "to begin." The word *lò* is located incorrectly in the original sentence. It should be part of the phrase "arrives at the bakery early" in the corrected sentence rather than as part of the phrase "to begin to bake" in the original sentence.

General Linguistics

Question #9 (Score Point 3 Response)

Morphology is the study of the parts of words and how those parts combine. One central concept of morphology is the difference between a bound and a free morpheme; a bound morpheme cannot stand on its own, but a free morpheme can. Another central concept of morphology is the idea of an affix. An affix is a bound morpheme that gets attached to a word; it can be attached at the beginning or end of a root word. When it is attached to the beginning of the word, it is called a prefix, and when it is attached to the end of a word, it is called a suffix. The word unthinkable contains examples of free and bound morphemes and of affixes. It has a free morpheme (think) and two bound morphemes that are affixes (the prefix -un and the suffix -able).
